

**I should have had a diagnostic health check!**

## Why will a diagnostic health check help me?

- › Lower running costs through better fuel economy
- › Reduced risk of breakdown due to pending component failure
- › Confirmed operation of safety systems
- › Improved performance
- › Maximise your vehicles resale value through accurate service records
- › Peace of mind in knowing your car is performing at its best

You may think your car is running well, the diagnostic health check can confirm this.

If you wait until this happens, it could be costly...

**...so ask about a diagnostic health check for your car now!**

Your modern motor vehicle is highly sophisticated; the need for accurate, fast and effective diagnosis of problems is critical.

Prevention is better than cure, and usually less expensive. That's why we recommend that your vehicle has a diagnostic health check as part of its routine service.

› They can be part of your routine service, or as a pre-service check

› In addition to engine related issues; SRS, ABS, Air Con and other systems can be checked

› A regular diagnostic health check can help identify pending component failure and possibly avoid a costly repair bill in the future

## I should have had a diagnostic health check!

The average family car may have as many as 20 microprocessors located around the vehicle. These processors are constantly monitoring and where necessary adjusting the operation of the vehicle while you're driving. **THIS IS GREAT... BUT**, In the past when you noticed high revving,

spluttering etc. you rushed to the garage. **TODAY**, your on-board diagnostic system is constantly making adjustments so **YOU DON'T NECESSARILY** know you have a problem. With a regular diagnostic health check you can avoid costly bills before a crucial breakdown happens.
